

Woodward Inc. Expands Fabrication Capabilities with New Burning Machine and Facility Addition

MARS, Pa., February 26, 2025 – Woodward Inc., a regional metal fabrication company, is investing in a new shape cutting/layout burning machine and manufacturing facility expansion. This equipment and expansion will enhance production capabilities and meet growing customer demand. Construction on the facility addition is expected to be completed by fourth quarter 2025.

The new burning system will allow Woodward Inc. to process 12'x 40' plates, increase precision cutting, provide bevel/weld prep. options, improve efficiency, and expand its ability to serve a diverse range of industrial customers. The facility's addition will accommodate this advanced technology while providing space for future growth.

“We are committed to investing in the latest fabrication technology to improve efficiency and continue delivering high-quality metal components to our customers,” said Kevin Leczkowski, general manager of Woodward Inc. “This expansion strengthens our ability to serve regional industries while positioning us for future opportunities.”

Woodward Inc. is the parent company of Mars Mineral, a global provider of pelletizing technology. The equipment investment at Woodward will further support Mars Mineral’s equipment manufacturing capacity, ensuring continued excellence in pelletizing solutions for industries such as carbon black, biochar, and energy storage.
